

## RX insert for laser safety frames R01 and R17

### Highlights

At some applications a laser safety goggle is not appropriate for spectacle wearers, laservision offers for the frames R01 and R17 a so called RX insert as an option. This insert consists of a small metal frame without arms, which can be fitted with corrective lenses by an optician. The insert can be easily mounted. Delivery includes two screws for the frame and a master model for lens grinding or you can use the in-house [glazing service](#) from laservision and save yourself the trip to the optician. You can find the order form in the middle of the page.
